

## About Us

Last Updated Wednesday, 07 March 2007

Believe in Alternatives.  
Believe in the Future.

Butler, Freeman & FOSS is a locally owned and operated Free and Open-Source Software (FOSS) consulting firm that provides high-quality software development, systems integration, and technology expertise to North-East Ohio businesses.

We have over 15 years experience creating, customizing, integrating, and supporting both proprietary and free and open-source software and technologies (especially GNU/Linux) in demanding business environments - both local and national in size and scope. We possess the knowledge and experience to provide business solutions of the highest quality using the latest FOSS technologies as well as the ability, when necessary, to integrate together with proprietary and/or in-house solutions.

We believe that the best way to provide you a business solution is to use the latest and most appropriate Free and Open-Source Software, customized to exactly meet your needs. FOSS solutions provide you greater ownership of your important business information and processes and prevent "Vendor Lock-In".

You, and only you, should control the critical information infrastructure of your business and you should always expect and receive superior customer service, effective support, and the ability to get the features your business requires. All solutions we provide are fully Open-Source with grants of freedom that permit you to support, modify, and control your business infrastructure and future requirements with or without our partnership.

Contact us for a free consultation to discuss how we, with Free and Open-Source Software and Solutions, can fulfill your business needs.
